TELEDATAONE

Partner update hub

Brief overview of what's new

Current overview: November 3, 2026 **Audience: TeledataOne partners**

This brief summarises the TeledataOne Partner Update Hub. Contents are updated as features, milestones and technical information are confirmed; check the Partner Update Hub on the website for the latest status.

Topics

01
OneConfig & Software
3 updates · Cloud and Offline configuration, standard USB transfer and the new OneConfig 2.0 RS232 roadmap.

02
OneLive
2 updates · Worldwide and country-level visibility today, with vector maps and zoomable floor plans coming next.

03
Control Panel & Firmware
6 updates · Firmware speed, panel features, logo upload, network-wide disable/enable and sounder synchronization.

04
Products & Hardware
7 updates · OneMini Gas, OneNext, OneSiren, Lock Key Cabinet, detectors, PCB QR labels and Series X.

05
Smoke Management
1 development · A new board and firmware application being developed with selected customers.

06
Partner Resources
4 resources · Returned-board reports, catalogue, partner presentation, demos and training.

At a glance

4×
Faster firmware updates
About 5 minutes instead of 20.

Any USB
Standard USB compatibility
Transfer OneConfig programming without a dedicated USB key.

Country view
OneLive quality visibility
A read-only view for exclusive distributors.

2 major launches
OneNext + OneSiren
Important hardware projects moving toward certification.

How to read the status labels: “Available now” means the function or material can be used today. “Improved” marks an existing feature or product that has been enhanced. “Coming next” marks a planned update. “In certification” means the product is going through certification. “In development” means the scope or timing may still change.

Partner updates

Available now · Products & hardware

OneMini2 is available to order

The OneMini2 fire alarm control panel is available to order and can be certified. Product details are on the OneMini2 product page.

Control panel

Available now · OneConfig

OneConfig Offline + Cloud

Prepare and manage projects with or without an internet connection. Organization branding options are available in both environments.

Current workflow

Available now · OneConfig

Any standard USB drive can be used

Transfer programming between OneConfig and the control panel with any standard USB drive. Dedicated USB hardware is no longer required.

Improved compatibility

In development · OneConfig

OneConfig 2.0: RS232 programming and live diagnostics

The next configurator keeps the existing cloud workflow and adds direct RS232 programming in Phase 1, followed by live diagnostics on the technician's laptop in Phase 2.

Preview demo can be arranged

Available now · OneLive

OneLive worldwide and country view

Super Admin can view installations worldwide. Exclusive distributors can see installations in their own country, including systems installed by other companies, in read-only mode.

Available now

Coming next · OneLive

OneLive vector maps and zoomable plans

Vector maps will allow zooming in and out of detailed floor plans, including large sites such as airports. A structured image hierarchy is also planned.

Planned by December 15, 2026

Available now · Control panel & firmware

Firmware updates are 4× faster

Update time has dropped from approximately 20 minutes to approximately 5 minutes, reducing time on site and customer downtime.

~20 min → ~5 min

Available now · Control panel & firmware

Additional System Vulnerability Solved

An additional system vulnerability has been solved. Contact Teledata for more information about the correction.

Contact us for details

Available now Control panel & firmware

Customer logo upload by USB

Teledata sends a logo-only file. The partner or customer can upload it directly to the control panel on site, without returning the panel to the factory.

Customer self-service

Available now Control panel & firmware

More control panel configuration functions

Auto-addressing, technological input functions such as Reset, Silence and Key, independent Base Sounder output control, and mimic panel management.

Available now

Available now Control panel & firmware

Network-wide enable and disable

Enable or disable devices, zones, loops and outputs from a panel in the network, including output groups and all outputs.

Useful during testing and maintenance

Improved Control panel & firmware

Improved sounder synchronization

Teledata has achieved a significant synchronization improvement across different protocols. The next OneSiren generation is expected to take this to a perfect level.

Current improvement + next step

Available now Products & hardware

OneMini Gas

A dedicated gas control unit for wired 4–20 mA gas detectors through the ONEMODULE420 module.

Product in range

Available now Products & hardware

Lock Key Cabinet

The cabinet door is now available with a metal-key lock. Previously, access was secured with screws only.

New option

In certification Products & hardware

OneSiren: new sounder platform

Wall, ceiling and flush-mount options, 32 selectable tones and sound output listed at 100–105 dB at 1 m depending on tone. Certified EN 54 Part 3 and Part 23, with Part 23 at only 9 mA: a world record.

Expected availability: January 2027

Coming next Products & hardware

OneNext with 7-inch touchscreen

OneNext adds a larger 7-inch touchscreen, removable top connectors, support for cables up to 2.5 mm² (AWG 12), and plug-and-play boards.

Certification target: late Dec 2026 / early Jan 2027

Improved Products & hardware

Smoother detector opening and closing

The opening and closing rotation is smoother, and the gap between detector head and base is smaller for easier installation and a cleaner finish.

Hardware improvement

Available now Products & hardware

QR code labels on loose PCBs

Loose expansion boards and control-panel components now carry QR labels for faster identification, traceability and support.

Available on loose boards

Available now Products & hardware

Series X: efficient, optimized configuration

A high-efficiency product line with optimized functions, designed for local installations and markets with strong price pressure.

Product line

In development Smoke Management

Smoke Management with selected customers

Teledata is working with selected customers on a dedicated board and firmware functions for input/output status and OneMimic LED indication.

In development

Available now Partner resources

Detailed reports for returned boards

For boards returned to Teledata, a detailed failure report can be provided on request through your Teledata contact.
